

Press Release

Zurich, 4 March 2016

Better working with oneclick's digital workspace

oneclick AG has developed a platform that enables small and medium sized companies to provide completely automated digital workspaces – easily and quickly. Users access required software or data via a browser based user interface from any device.

Advantages of oneclick's digital workspace

oneclick AG offers a comprehensive management framework and complete infrastructure for the organisation of digital workspaces. This allows IT managers to provide and allocate software efficiently and flexibly.

Users work with the digital workspace independent of any device. This increases mobility, security and productivity. If a device is defective, lost or stolen, users are able to continue working where they stopped earlier with any replacement device.

"Organisations can considerably reduce their IT costs with digital workspaces." says Dominik Birgelen, CEO of oneclick AG. "Our platform helps to comply with legal requirements, correct software licensing and protection of sensitive company data."

Key features of oneclick's digital workspace

"Thanks to a high level of automation and wizards, you don't need to be an experienced administrator to set up, operate or provide digital workspaces quickly and securely for employees, customers and partners worldwide." explain Mathias Meinke and Florian Bodner, CTO and CIO of oneclick AG.

oneclick AG offers a service that runs continuously, is always up to date and can be scaled as required. The service is available in 65 data centres to enable a fast data transfer for mobile working. At the same time, data remains secure at the respective hosting location, meeting the requirement for local data storage.

How software gets onto the digital workspace

There are three options for software to get onto oneclick's digital workspaces. They can be combined as required and are adapted to each customer's individual starting position.

1. You can connect any local target infrastructure with **oneclick™Access!** to enable worldwide, smooth access to existing desktops and applications. All this is 100% web-based, without client installation or plug-in on the end user device.

2. **oneclick™Pass!** works as a central and secure gateway to applications in the cloud. With one click from the user interface in the browser, you get to any application and are able to switch between applications via a quick selection menu.
3. **oneclick™Go!** allows you to subscribe to software directly in the company owned oneclick™Store and is then available within minutes for use on a digital workspace.

How oneclick reaches companies

oneclick AG sells its solutions also through indirect channels and cooperates with cloud providers and system integrators. "More and more traditional system integrators now have the topic digital workspaces on their agenda. We offer a solution to the channel that allows simple and profitable entry into the cloud business." explains Kathleen Peters, Senior Vice President Marketing & Communications at oneclick AG.
