

Press Release

Zurich / Herlev, 17 July 2017

oneclick expands its Workspace with Printer Management by Printix

oneclick AG, the operator of the Application Delivery and Streaming Platform of the same name, and Printix.ApS have agreed a strategic partnership to complement their solutions.

Applications and data are streamed via the oneclick™ platform from any server location into a central workspace in the browser. Users are able to access their workspace in the browser with any device. As a Platform-as-a-Service, oneclick™ is immediately ready to use for anybody requiring simple, fast and secure remote access. The idea is simply: Connect the server location and deploy applications in a user workspace. There is no more need for software components or clients having to be installed on servers and devices. The platform communicates directly, using well-known remote, terminal and web protocols.

Printix is specialised in the development cloud-based print management solutions. It offers simple-to-use print management from the cloud in areas, where normally a local infrastructure with printer servers, database and a lot of specialist knowledge would be required. This can provide cost savings regarding own printer servers and their administration.

"The big problem of many remote solutions is printing", explains Mathias Meinke, CTO at oneclick AG. "Besides operation and set-up of the network infrastructure, driver management represents the highest cost item in print management. With Printix, all print management components come from the cloud – this is both efficient and cost effective. The integration of Printix into our Application Delivery and Streaming Platform enables our customers now to access any network printer from any device, no matter where they are at any point in time. In addition, Printix offers many other features for secure and confidential printing, such as authentication and release at the local printer, automated creation of print queues as well as the implementation of printing rules."

To find out more about the Application Delivery and Streaming Platform of oneclick AG and its cooperation with Printix, please visit our website <https://oneclick-cloud.com>. There you can also register for a test account.
