

Press Release

Zurich, 22 March 2018

oneclick AG cooperates with SEH Technology

Thanks to SEH's USB-to-Network Technology, USB devices and dongles can now be integrated into and used with the oneclick™ platform's digital workspaces.

With the oneclick™ platform, software applications and data are delivered into a central workspace in the browser from any server location. The digital workspace is accessed independently of place and time via a secure web portal using any terminal device.

"It used to be a special challenge to integrate locally connected USB devices into our digital workspaces", says Florian Bodner, CIO of the oneclick AG. "With SEH's USB-to-Network Technology, USB devices can now be connected in a simple, fast and secure way. Our customers can now flexibly and under controlled conditions access all types of USB devices. They can effectively use external hard drives, memory sticks, scanners, medical devices, measuring devices, RDX-drives, multifunctional devices, cameras, telephone systems and many more. Even copy protection dongles can be provided centrally. Secured software can be used as usual, however, without having to directly insert the dongles into the client. The users access their dongles anytime effortlessly via the network, while the dongles are safely administered in a central place."
