

Press Release

Zurich, 01 October 2019

oneclick in “Gartner’s Hype Cycle for the Digital Workplace” report 2019

oneclick is featured in the "Gartner Hype Cycle for the Digital Workplace" report 2019 as a sample vendor for "Unified Workspaces".

Gartner’s hype cycle shows which phases of public attention a new technology goes through during its introduction. Gartner notes that an upturn in digital workplaces is leading to a higher global maturity of the digital workplace.

The introduction of digital workplaces is changing the culture and enabling new ways of working: tailored to the personal work-life balance and independent of the end device and work location.

In the "Hype Cycle for the Digital Workplace" report 2019, IT managers responsible for providing applications learn how work will develop over the next few years under the premise of digitalisation. They want to develop their legacy applications in the direction of software-as-a-service.

Pascal Poschenrieder, CTO of oneclick AG, states: "Exactly this transformation can be achieved offhand with oneclick[™]. Existing infrastructures can be directly connected to the platform and the existing applications and data can be streamed into a workspace in the browser. In addition, cloud resources can be made available in the form of virtual machines in the data centres of well-known IaaS providers via oneclick[™], which is suitable for providing digital workplaces for any combination of on-premises, cloud and hybrid infrastructure. Access will be controlled via an integrated identity management system and additionally secured with guidelines."
