

Press Release

Zurich, 12 March 2020

Instantly available IT solution for home office workplaces

In times when business travel is restricted and employees prefer to work from their home office, corporate IT must adapt quickly. Businesses need to respond to the crisis with both short and long-term measures to increase resilience to future disruptions and prepare for recovery and renewed growth. It is now the time to develop a digital workplace strategy that includes collaboration applications, security controls, bring-your-own-device (BYOD) programs and network support.

Many companies are faced with major hurdles in this respect:

- How can I easily access centrally hosted applications and data via "plug & play" with any device?
- How can I enable high-performance remote access that feels as if users are working locally?
- How can I open my corporate network securely to external users?
- How can I set up a new VDI infrastructure within hours?

These are just a few of the questions that IT decision-makers ask themselves in such situations. In larger companies with several 1,000 employees, the challenges become even greater.

oneclick™ provides answers and shows how working from the home office via streaming works easily, quickly and securely for any size of company and any application environment. Load tests of large companies show, for example, that with oneclick™ many more users can be mapped with the existing infrastructure compared to classic VDI technologies, because no software component of oneclick™ has to be installed on application servers, which consumes overhead resources.

The project managers of oneclick™ can implement small and large projects efficiently and within the shortest possible time, even in times of crisis, when speed and reliability are required under high pressure. Already tomorrow, a remote access infrastructure can be up and running from the cloud, available worldwide, with maximum security, without installation on servers or end devices, without VPN, without setup costs, with flexible billing per user and month.

Our oneclick™ team is available for immediate appointment organization, by phone at +44 121 512 0089, by e-mail to info@oneclick-cloud.com or via our website <https://oneclick-cloud.com/en/>.
